### **DETAILED ACTION**

Receipt is acknowledged of the amendment and terminal disclaimers filed 09/11/2007.

The rejections under the judicially created doctrine of obviousness-type double patenting are withdrawn in view of the terminal disclaimer.

The following rejection is maintained in this action:

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-16 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 91/07357 (Berger et al).

Berger et al disclose a porous, rapidly soluble glass ceramic comprising the same components of the instantly claimed crystalline phase which is used as a bone replacement composition (see Abstract; Claim 7). In particular, claim 7 sets out the same raw materials as claimed herein. Berger forms a crystalline and amorphous phase. Processing of the material appears to utilize heat melting of the materials. It is therefore the position of this examiner, that

those of ordinary skill would have expected not only the same composition characteristics from the workup of these materials as taught by Berger et al, but also the same bone replacement effects. The instant claims would have been obvious to one of ordinary skill in the art at the time of invention given the material and processing steps as disclosed by Berger et al.

***Response to Arguments***

Applicant's arguments filed 09/11/2007 have been fully considered but they are not persuasive.

Applicant argues that the reference to Berger et al does not disclose or suggest either the necessary starting materials or the thermal treatment required to form the resulting crystal phases and inorganic compounds of the claimed invention. Applicant further points out that claim 2 is a product by process claim which differentiates through the thermal treatment of these starting materials.

However, a review of the starting materials finds that the same materials are indeed claimed with a significant overlap in the amounts used for each. Further, although the treatment process may differ, the claims are treated as product claims until such time as applicants can show that the instant claims differ materially from that of the reference. In this case, applicant would be required to show that the same materials produce different NMR, X-Ray diffractometric measurements, and the X-Ray amorphous and crystal phases differ from what is

currently claimed. Until this data is provided, the rejection under 35 USC 103(a) is hereby maintained.

***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
